## Description

### General information

Epivir Hbv goes to some type of drugs referred to as nucleoside reverse transcriptase inhibitors (NRTI). It functions by slowing down the development from the virus, therefore lowering liver damage triggered through the virus. Epivir Hbv can be used to deal with hepatitis B infection. It's not relief from hepatitis B and doesn't avoid the passing of hepatitis B to other people. Epivir Hbv shouldn't be utilized in those who are have contracted both hepatitis B and Aids.

### Directions

Take Epivir Hbv just as recommended from your physician. Take medicines orally without or with food, usually once daily. The suggested dose for dealing with hepatitis B in grown ups is 100 mg once daily. For kids 2 to 17 years of age, the dosing is dependant on weight, about 3 mg per kilogram once daily (up to and including more 100 mg each day). A lesser dosage might be suggested for those who have kidney problems. Take Epivir Hbv simultaneously every single day to keep a level degree of the medication inside your bloodstream.

### Safeguards

Before you take Epivir Hbv you need to engage with your physician for those who have Aids infection, inflammation from the pancreas (pancreatitis), liver disease, liver failure, cirrhosis, hepatitis, kidney disease, kidney failure, bloodstream disorders, any allergic reactions. This drug could make you dizzy. Don't drive or perform tasks that need performance. Avoid alcoholic drinks. Alcohol may improve your risk for liver problems or pancreatitis. Inform your physician if you're pregnant or breastfeeding. Children, especially individuals with pancreatitis, might be more responsive to the results of the drug.

### Advisable limitations

You shouldn't take Epivir Hbv if you're allergic into it, lamivudine, or any inactive aspects of the medication.

### Possible side-effect

Get emergency medical help for those who have headache, lightheadedness, nausea, diarrhea, sleep problems, strange dreams, depression, numbness of hands or ft, muscle weakness, stomach or back discomfort, bleeding, rapid heartbeat, pale skin, swelling from the face, tongue, throat, trouble breathing, hives, jaundice (yellowing of your skin or eyes), dark urine, appetite loss, fever, chills, body aches, joint discomfort.
